Laravel Artisan Module Lifecycle Command Cheat Sheet

🔁 Check Module System State

```
php artisan module:state
```

🔍 Debug a Specific Module (e.g., Core)

```
php artisan module:debug Core
```

🚀 Enable a Specific Module (e.g., Core)

```
php artisan module:enable Core
```

🧪 Re-Debug to Confirm Module is Enabled

```
php artisan module:debug Core
```

📋 List All Available Modules

```
php artisan module:marketplace list
```

🛠️ Create a New Module (e.g., Test3)

```
php artisan module:make Test3
```

📦 Install the Newly Created Module

```
php artisan module:marketplace install Test3
```

✅ Enable the Installed Module

```
php artisan module:enable Test3
```

📝 Verify Module Status After Installation

```
php artisan module:marketplace list
```

🗑 Remove the Test Module

```
php artisan module:marketplace remove Test3
```

🔄 Check for Module Updates

```
php artisan module:check-updates
```

🧹 Clean Up Orphaned or Broken Modules

```
php artisan module:marketplace cleanup
```
